

ASHER CHAKUPA

Woodhouse, Leeds, LS2 9JT, UK • +44 7551 719953 • chakupaa@gmail.com / dgzn0119@leeds.ac.uk

EDUCATION

University of Leeds

Leeds, United Kingdom

MSc. Electrical Engineering & Renewable Energy | CGPA: 4.0/4.0

Sep 2026 – Present

Relevant Coursework: Electric Power Generation by Renewable Sources, Electric Power Generation & Distribution

Smart Grid Analysis, Carbon & Energy Management, Modern Industry Practice, Control Systems Design

Ashesi University

Accra, Ghana

BSc. Computer Engineering | CGPA: 3.35/4.0

Jan 2020 – Aug 2024

Relevant Coursework: AI Robotics, Embedded Systems, Applied Programming, Intermediate Computer Programming

PUBLICATION

Chakupa, A., Chomurove, P., & Nhanga, R. E. (2024). *Advanced automated security system for high-value assets*.

WORK EXPERIENCE

Service Delivery & Operations Analyst – Econet Group (EcoCash) | Harare, Zimbabwe

May 2026 – Aug 2026

- Ran hands-on AI adoption sessions showing finance, HR and operations colleagues how to apply large language models to their own reporting, analysis and documentation, and how to check the output before trusting it.
- Worked across Claude, Gemini and OpenAI models on live operational tasks, compared where each performed better and advised colleagues on which tool fitted which problem.
- Embedded AI-assisted analysis into Linux service monitoring, applying models to logs and performance data to surface anomalies ahead of customer impact and support predictive service management, with engineer review before any action.
- Automated service performance reporting with Ansible, SQL and cron, and user provisioning in Keycloak with Python, removing hours of repeated manual work each week.
- Built an HR forms workflow in Power Apps, Power Automate and Adobe Sign, replacing four paper processes with digital submission, approval and e-signature for staff across the business.
- Coordinated with stakeholders across multiple Econet Group business units during a group-wide disaster recovery drill, validating service availability after a data centre failover.

Business Intelligence Consultant – Fligh Tech | Harare, Zimbabwe

Jan 2026 – May 2026

- Built AI agents in Python to scrape and capture market data from web sources, turning scattered public information into a structured dataset the business could act on.
- Ran AI-assisted analysis over that dataset to compare markets, then validated every output against independent research before recommending anything.
- Researched drone, robotics and autonomous systems adoption across agriculture and industry to identify expansion markets from Zimbabwe into Southern Africa, wider Africa and international markets.
- Built a market prioritisation framework and presented a phased entry plan that directed where the business focused development effort first.

AI Automation Architect – Lomar Labs | UK, London

May to Dec 2025

- Designed a weekly intelligence workflow using Retrieval-Augmented Generation, Microsoft Copilot, Power Automate and webhooks, returning roughly five hours a week to the team.
- Built a WhatsApp business assistant on APIs and webhooks to ingest deal conversations and generate summaries, so colleagues stopped rereading message threads to find context.
- Automated contract drafting, approval and e-signing end to end with Power Automate, SharePoint and Adobe Sign, cutting manual handling and turnaround time.
- Applied agentic AI architecture to choose which processes suited AI-assisted retrieval and decision support and kept human approval at every point where judgement mattered.
- Delivered inside a Greek-owned multinational maritime group, working across nationalities and technical disciplines.

Startup Support Intern – Lomar Labs | UK, London

Feb 2025 – May 2025

- Connected third-party platforms into the Microsoft ecosystem using webhooks and REST APIs, so external events triggered internal workflows automatically instead of being re-entered by hand.
- Pulled meeting notes and call transcripts through platform APIs and ran them through language models to produce structured summaries and action points for the investment team.
- Automated deal flow analysis, using AI to sift inbound startup material against evaluation criteria and surface the opportunities worth partner attention.
- Identified and assessed AI, autonomous and emerging technologies for deployment aboard commercial shipping vessels, judging technical maturity, integration cost and operational fit at sea.
- Refined business models for 10 portfolio companies alongside their founders, two of which progressed towards investment and pilot opportunities.

RELEVANT PROJECTS

Departmental AI Enablement – Econet Group (*EcoCash*) | Claude, Gemini, OpenAI models

Jul 2026 – Aug 2026

- Colleagues outside engineering had no practical route into Gen AI. Mapped the tasks each model handled well, ran walkthroughs department by department and taught staff to verify output before relying on it.
- Left teams able to use AI in their own reporting and analysis without escalating to engineering and left a habit of checking rather than trusting.

AI Weekly Intelligence Digest – Lomar Labs | RAG, Copilot, Power Automate, webhooks

Feb 2025 – May 2025

- The team lost hours each week collecting and reading scattered sources.
- Built a retrieval pipeline that gathered, processed and synthesised material into one structured weekly digest.
- Saved around 5 hours a week and gave non-technical colleagues their first useful encounter with a Gen AI system.

ML Theft Detection for Telecom Infrastructure | Ashesi capstone | Python, machine learning

Jan 2024 – Aug 2024

- Base station equipment theft caused outages and replacement cost for Liquid Telecommunications. Built a machine learning detection approach over site sensor and operational data to flag intrusion events.
- Published as a peer-reviewed paper, written for readers outside the project team.

CERTIFICATIONS

Introduction to Agent Skills, Anthropic (2026) | AI-300 Operationalizing ML and Generative AI Solutions, Microsoft (2026) | AB-100 Agentic AI Business Solutions Architect, Microsoft (in progress) | Agile Project Management, Google (2025) | Intermediate Python for Data Analysis, Arizona State University (2025) | Linux and Private Cloud Administration, IBM (2024) | Docker Foundations

SKILLS

AI: Generative AI | Claude, Gemini and OpenAI models | Multi-model evaluation | Retrieval-Augmented Generation | AI agents | Agentic AI architecture | Prompt engineering | Machine learning | AI-assisted anomaly detection | Human-in-the-loop design

Engineering and automation: Python | Web scraping and data extraction | SQL | Linux | Kubernetes | Rancher | Docker | Keycloak | Zabbix | SigNoz | Ansible | Git | REST APIs | Webhooks | Microsoft Copilot | Power Automate | Power Apps | SharePoint | Power BI | Event-driven automation | ITIL | Observability | Disaster recovery | Postilion, ISO 8583 and ISO 20022 | Excel and data visualisation

LEADERSHIP & CO-CURRICULAR EXPERIENCE

Local Hub Ambassador, beVisioneers: The Mercedes-Benz Fellowship

Jun 2025 – Jun 2026

Worked with eco-innovators applying intelligent systems to environmental problems and supports the software being built around them.

Senior Member, Google Developer Student Club, Ashesi University

Aug 2023 – Aug 2024

Supported fellow students learning Google Cloud through setup, services and first deployments, in sessions and one to one.

Tutor, computational and programming courses, Ashesi University

Taught 30 students drawn from 18 nationalities to a 95% pass rate, adapting explanations across languages, prior knowledge and confidence levels. Continued tutoring informally through clubs and later in the workplace.

Vice President, Ashesi Wiki Club, Open Foundation West Africa

Jan 2022 – Mar 2023

Led a chapter writing and improving Wikipedia articles, closing gaps in openly available knowledge on African subjects.
